Revealing Module Pattern

```javascript
const CarModule = (() => {
  let carMake = null
  let carModel = null
  let carColor = 'white'

  const getCarMake = () => carMake
  const setCarMake = (make) => {
    carMake = make
  }

  const getCarModel = () => carModel
  const setCarModel = (model) => {
    carModel = model
  }

  const getCarColor = () => carColor
  const setCarColor = (color) => {
    carColor = color
  }

  return {
    getCarMake,
    setCarMake,
    getCarModel,
    setCarModel,
    getCarColor,
    setCarColor,
  }
})()

CarModule.setCarMake('Toyota')
CarModule.setCarModel('Corolla')
CarModule.setCarColor('red')

CarModule.getCarMake() //Toyota
CarModule.getCarModel() //Corolla
CarModule.getCarColor() // red
```
